Kari Vaage : Indigenous peoples in Costa Rica and El Diquis hydroelectric project: Indigenous identity, consultation and representation before purchasing it in order to gage whether or not it would be worth my time, and all praised Indigenous peoples in Costa Rica and El Diquis hydroelectric project: Indigenous identity, consultation and representation:

This book investigates the Brunca and the Teribe, two indigenous groups in Costa Rica, and their response to a proposed hydropower development on their territories. The Costa Rican Institute of Electricity (ICE) started the first attempt in order to extract the hydropower resources on the indigenous territory in 1970 with the Boruca Cajn Project. However, this project stagnated and today the Proyecto Hidroelectrico El Diquis (PHED) is the current alternative of the same project, affecting Tribe territory. A conflictline can be drawn between the Tribe fighting against the PHED, and those in favour of the plans. The aim of this study has been to investigate the resistance against the hydropower development in the indigenous communities and their arguments for fighting the project.

About the Author Kari Vaage holds the title M.Sc within the field of Development Studies. She completed her degree at Norwegian University of Life Sciences in 2011. Her main focus of study is the rights of indigenous peoples in Latin America.
